

Person 1:

- The scale for projects by type is confusing, when clicking on a type the axis changes which is confusing. Also, what does it mean to select a type and why are other types still shown (this is because of multiple types per project, but that's not something they immediately understood). The filter on the right side also doesn't change when clicking on a type. Maybe we should add some explanation and make it linked with the filter?
- The sankey is a bit unclear if you don't know how it works, of course our persona knows about this, but it is unclear that projects can have multiple challenges and multiple types. Also Climate Action changes order in the sankey when you click on a challenge which was a bit confusing. The challenge is also not part of the filter on the right side, might be nice to add this still.
- Not all countries are in the country list, what does it mean if you're not there? Should we maybe add a description?
- The header of the compare basket is not aligned for some projects with a long name, if we're really nitpicking it might be nice to change this :)
- In the compare overview, the NbS type stands above the Challenge, I think it might be nice to change the order as a challenge leads to a type, not the other way around

Person 2:

- 1) add a filter on the challenge addressed (to make it more streamlined with the fact file card), similar with the costs of projects
- 2) change the filter names to be the same as those on the fact file (e.g. type -> NbS Type)
- 3) in the comparison box (up to 3), have the rows aligned so that the user can easily see the differences between them
- 4) on the bar chart, be able to click on the text as well as the bar to select that particular bar - as some are small
- 5) have labels on x and y axis on the bar chart (y axis sideways for user - i.e. parallel to the y-axis itself) and x axis should show what is happening - make it more intuitive of the display
- 6) sankey order should stay in place at all times, so when a user clicks on one part of any filter/diagram, the sankey order is the same (not changing due to size for example)

- 7) donut chart should show the whole section (i.e. grey out the parts not clicked on), instead of having the whole donut showing the filtered section (the part that was clicked on)
- 8) have the automatic load on a project - i.e. when there is a selection of projects at one location, the user can select which one they want from a drop-down menu. Right now , they have to press "load" to get that project after they have selected it from the list. I want it so that the user doesn't have to press load but that it automatically does that.
- 9) dots are currently covering other dots, this can be solved by allowing the user to zoom in more (e.g. to county level in the UK) - right now, there is a set limit that they can zoom into.
- 10) compare button in the fact file section should stay blue if the compare basket is open (so the user knows that it is open)
